

Wave Hauler

Line Handling Boat

Hull Form

This line handling boat combines the characteristics of a highly efficient small tug boat with excellent sea-keeping and a surprising turn of speed.

The boat is designed to operate effectively when handling heavy hawsers or hoses over the stern in her primary role and she is fitted with a capstan and tow posts with off load release hook well forward of the stern to maximise directional stability when towing.

She is also equally well adapted for crew transfer operations with seating for 12 passengers and a bow transfer arrangement as well as for diving duties with a stern platform and removable dive ladder. She is crane launched from the mother ship and this versatile boat is sturdy enough to cope well with the rigours of in field operations.

Principal Dimensions

Length overall	9.3m
Beam overall	3.2m
Bollard pull	3t
Draft	1.1m
Maximum speed	18kts

Main Features

- One tonne capstan
- Dive platform
- Bow transfer
- Seating for 12 passengers
- Crane launched

Main Equipment
