

Wave Cadet

Diver Support Workboat

Hull Form

The Wave Cadet is a robust but versatile aluminium catamaran designed to provide support for commercial diving and survey operations in inland waters or sheltered coastal waters. She has a sea kindly hull that provides an exceptionally stable platform and a very comfortable working environment for a relatively small boat. Fitted with twin waterjets she is very manoeuvrable and has a very shallow draft making her ideally suited to work around the shoreline. The first of class boat is powered by twin inboard diesel engines although she could equally well be powered by outboards or stern drives and she can be fitted with a moon pool and survey equipment as required.

Principal Dimensions

Length overall:	8.7m
Beam overall:	3.14m
Displacement (light):	3.5t
Speed (light):	12kts

Main Features

- Aft dive platform and ladder
- Diver recovery davit
- Large protected wheelhouse

Main Equipment

- 2 x 90bhp marine diesel engines
- 2 x Hamilton 770 waterjets

Certification

- Meets MCA workboat rules
